

**Sale Name:** Chairs Limited Business Closure Auction - Owner Retiring

**LOT 164 - Metal Carpenter's Level**

**Description**

This is a metal carpenter's level, typically used in construction and carpentry to measure the evenness or "level" of a surface. It features a long rectangular shape with measurement markings along the edge, useful for measuring lengths. The tool includes a handle for easy carrying and two built-in bubble vials that help determine horizontal alignment. The level is likely made of aluminum or a similar metal, providing durability for various construction tasks.

**Quantity:** 1
